The JSON Link Client and Change

Adding MarkComplete Support

- OK, now (with links), let's add more features
- Need to support new field (completed) and filters
- How will our client do this time?

The MarkComplete Feature

- Data element : `complete=true|false`
- New Filters:
  - `?complete=true`
  - `?complete=false`
- Change server and let's see how the client does...

MarkComplete for API

MarkComplete for API

- Update object (map.js)
- Update actions (transitions.js)
- Update representation (jsonurls.js)

How does client do?

- Client automatically shows new filters (address)
- Client fails to show new data (object)
- Client fails to show prompt for a new field (action)
- The OAA Challenge strikes again.

New client version needed (still)

- Update the object (add "completed" field)
- Update the actions (add "completed" to add & edit)
- So what did we "win" by adding just links?
